PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary	Application No. 09/819,712	Applicant(s) SHINZAKI, TAKASHI	
	Examiner Thein Marissa	Art Unit 3627	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 January 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 and 65 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18 and 65 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 19, 2007 has been entered.

Response to Amendment

Applicant's "Request for Continued Examination" filed on January 19, 2007 has been considered.

Claims 1, 17, and 65 are amended. Claims 1-18 and 65 are pending in this application.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 and 65 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed,

had possession of the claimed invention. Claims 1 and 65 recite "deciding that the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal; and transferring the commodity to a receiver for the commodity at said non-residential place, when the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal, by using said transaction ID information and a receiver certifying information which is generated so that is void of personal identification information" which is not disclosed in the specification. If Applicant deems the recitation is in the specification, Examiner suggests pointing the recitation out in the specification by page number and line number.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 65 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrase "the receiver certifying information" lacks antecedent basis.

Claims 2, 5, 6, 9, 12, and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrase "wherein said commodity transferring step (e)" and "in said commodity transferring step (e)" lack antecedent basis.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6, 11-13, 15 and 65 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,807,530 to Shub et al. in view of U.S. Patent No. 7,069,249 to Stolfo et al.

Regarding claims 1, Shub disclose an e-commerce method for an e-commerce system, which includes a seller's terminal (merchant, col. 1, lines 55-57; col. 2, lines 3-3; Figure 1; col. 3, lines 43-44), a customer's terminal (customer, col. 1, lines 55-57; col. 2, lines 3-5; Figure 1; col. 3, lines 40-44), a payment agent's terminal (payment agency; Figure 1; col. 2, lines 3-5); and commodity delivery means (delivery companies; col. 2, lines 3-5), the method comprising: at the customer's terminal sending an anonymous order (anonymous buy) to the seller's terminal for a commodity via the information communication network and designating a non-residential place other than a residential place (alternate address, col. 6, lines 54-56; col. 2, lines 53-57) of the customer as the delivery destination via the communication network (col. 3, lines 9-12; col. 6, lines 43-61), said anonymous order being void of personal identification information (col. 1, lines 60-64; col. 4, lines 25-27); at the seller's terminal assigning transaction identification (ID) information (order number) peculiar to said anonymous order and notifying the customer's terminal of said transaction ID information (col. 6, lines 54-56; col. 2, lines

Art Unit: 3627

47-53), requesting the payment agent's terminal for payment for the commodity for which the customer's terminal made the anonymous order (col. 2, lines 49-53; col. 4, lines 40-43; col. 6, lines 50-53), making arrangements to deliver the commodity to the non-residential place using the commodity delivery means (col. 2, lines 53-col. 3, line 3; col. 6, lines 53-61; col. 7, lines 6-9); and transferring the commodity to a receiver for the commodity at the non-residential place by using information which is void of personal identification information (col. 3, lines 8-12; col. 5, lines 60-64; col. 6, lines 62-col. 7, line 1).

However, Shub does not explicitly disclose at the receiver certifying: deciding that the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal; and transferring the commodity to a receiver for the commodity at said non-residential place, when the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal, by using said transaction ID information and a receiver certifying information which is generated so that is void of personal identification information. Shub discloses a method of enabling a customer to remotely order goods from a merchant and receive the goods without revealing the customer's identity or address to the merchant (col. 1, lines 9-12). The customer identification information need not be disclosed to the merchant or to anyone other than the customer (col. 1, lines 62-64). Shub further teaches a private key/public key pair and a secret encoding key (col. 2, lines 26-28). The public key is used to verify that the label corresponds to the order, the identify and

address of the customer are not readable by being blinded or encoded (col. 6, line 62-col. 7, line 1). Furthermore, Shub discloses the customer has the option to request the order to be delivered to an alternate address (col. 2, lines 53-55). The goods is delivered to the customer's alternate address and gets the goods using the second bank order number x2 and the number pair (c, t) (col. 5, lines 60-63).

Stolfo, on the other hand, teaches an online shopping system, which a customer can designate, addresses or places where he or she wants to have goods delivered (col. 8, lines 3-8). Stolfo further teaches deciding that the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal; and transferring the commodity to a receiver for the commodity at said non-residential place, when the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal, by using said transaction ID information and a receiver certifying information which is generated so that is void of personal identification information (col. 19, lines 57-62; col. 23, line 61-col. 24, line 15; col. 25, lines 12-41).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the method of Shub, to include deciding that the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal; and transferring the commodity to a receiver for the commodity at said non-residential place, when the receiver certifying information generated by the customer's terminal is

corresponding to the receiver certifying information generated by the seller's terminal, by using said transaction ID information and a receiver certifying information which is generated so that is void of personal identification information, as taught by Stolfo, in order to ship a good ordered electronically over a communications network to the party that ordered the good while securing private and personal information of the party that ordered the good with respect to unauthorized parties (Stolfo, col. 6, lines 15-19).

Regarding claims 2-6 and 10, Shub substantially discloses the claimed invention, however, it does not explicitly disclose certification; the receiver certifying information which is created at the seller's terminal and price information of the transaction, together with the transaction ID information are notified to the customer's terminal; the customer's terminal notifies the payment's agent terminal of the transaction ID information and the price information, which have been notified by the seller's terminal; customer's terminal notifies the seller's terminal of receiver certifying information; a sales slip medium containing said transaction ID information in form of a read-out code; and the receiver for the commodity is certified as the authorized receiver, by reading out the transaction ID information of the sales slip medium; the transaction ID information is ciphered with the read-out code as a code key; and the ciphered transaction ID information of the sales slip medium is deciphered using the code key; and biometrics.

Shub discloses a method of enabling a customer to remotely order goods from a merchant and receive the goods without revealing the customer's identity or address to the merchant (col. 1, lines 9-12). Shub further teaches a private key/public key pair and a secret encoding key (col. 2, lines 26-28). Furthermore, Shub discloses the customer

has the option to request the order to be delivered to an alternate address (col. 2, lines 53-55). The goods is delivered to the customer's alternate address and gets the goods using the second bank order number x2 and the number pair (c, t) (col. 5, lines 60-63).

Stolfo, on the other hand, teaches an online shopping system, which a customer can designate, addresses or places where he or she wants to have goods delivered (col. 8, lines 3-8). Stolfo further teaches the certification (col. 19, lines 57-65); the receiver certifying information which his created at the sellers' terminal and price information of the transaction, together with the transaction ID information are notified to the customer's terminal (col. 23, line 61-col. 24, line 15); the customer's terminal notifies the payment's agent terminal of the transaction ID information and the price information, which have been notified by the seller's terminal (col. 17, lines 35-67); customer's terminal notifies the seller's terminal of receiver certifying information (col. 23, line 61-col. 24, line 15); a sales slip medium containing said transaction ID information in form of a read-out code (col. 19, lines 10-16); and the receiver for the commodity is certified as the authorized receiver, by reading out the transaction ID information of the sales slip medium (col. 19, lines 57-65); the transaction ID information is ciphered with the read-out code as a code key (col. 19, lines 24-39); and the ciphered transaction ID information of the sales slip medium is deciphered using the code key (col. 19, lines 24-39); and biometrics data (col. 19, line 64).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the method of Shub, to include the certification, as taught by Stolfo, in order to ship a good ordered electronically over a

Art Unit: 3627

communications network to the party that ordered the good while securing private and personal information of the party that ordered the good with respect to unauthorized parties (Stolfo, col. 6, lines 15-19).

Regarding claims 11-13 and 15, Shub substantially disclose the claimed invention, however, it does not disclose upon completion of delivery of the commodity of the non-residential place, the seller's terminal notifies the customer's terminal of the completion of the delivery; certification is made as to whether the receiver for the commodity is an authorized receiver, using receiver certification information; notifying the customer's terminal of a status of delivery of the commodity; and notification to the seller's terminal via communication network that the transferring of the commodity has been carried out in the commodity transferring step.

Shub discloses a method of enabling a customer to remotely order goods from a merchant and receive the goods without revealing the customer's identity or address to the merchant (col. 1, lines 9-12). Shub further teaches a private key/public key pair and a secret encoding key (col. 2, lines 26-28). Furthermore, Shub discloses the customer has the option to request the order to be delivered to an alternate address (col. 2, lines 53-55). The goods is delivered to the customer's alternate address and gets the goods using the second bank order number x2 and the number pair (c, t) (col. 5, lines 60-63).

Stolfo, on the other hand, teaches upon completion of delivery of the commodity of the non-residential place, the seller's terminal notifies the customer's terminal of the completion of the delivery (col. 25, lines 36-41); certification is made as to whether the receiver for the commodity is an authorized receiver, using receiver certification

Art Unit: 3627

information (col. 19, lines 57-62); notifying the customer's terminal of a status of delivery of the commodity (col. 23, line 61- col. 24, line 15; col. 25, lines 29-41); and notification to the seller's terminal via communication network that the transferring of the commodity has been carried out in the commodity transferring step (col. 23, line 61- col. 24, line 15; col. 25, lines 29-41).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the method of Shub, in order to ship a good ordered electronically over a communications network to the party that ordered the good while securing private and personal information of the party that ordered the good with respect to unauthorized parties (Stolfo, col. 6, lines 15-19).

Regarding claim 65, Shub discloses a method for conducting electronic commerce, comprising: receiving an anonymous purchaser order, said anonymous purchaser order being void of personal identification information (col. 4, lines 25-27); and assigning transaction identification information to the anonymous purchase order (abstract; col. 6, lines 44-61); and transferring an item purchased by said purchaser order using information void of personal identification information (col. 3, lines 8-12; col. 5, lines 60-64; col. 6, lines 62-col. 7, line 1); making arrangements to deliver the commodity to the non-residential place using the commodity delivery means (col. 2, lines 53-col. 3, line 3; col. 6, lines 53-61; col. 7, lines 6-9); and transferring the commodity to a receiver for the commodity at the non-residential place by using information which is void of personal identification information (col. 3, lines 8-12; col. 5, lines 60-64; col. 6, lines 62-col. 7, line 1).

However, Shub does not explicitly disclose at the receiver certifying: deciding that the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal; and transferring the commodity to a receiver for the commodity at said non-residential place, when the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal, by using said transaction ID information and a receiver certifying information which is generated so that is void of personal identification information. Shub discloses a method of enabling a customer to remotely order goods from a merchant and receive the goods without revealing the customer's identity or address to the merchant (col. 1, lines 9-12). The customer identification information need not be disclosed to the merchant or to anyone other than the customer (col. 1, lines 62-64). Shub further teaches a private key/public key pair and a secret encoding key (col. 2, lines 26-28). The public key is used to verify that the label corresponds to the order, the identify and address of the customer are not readable by being blinded or encoded (col. 6, line 62-col. 7, line 1). Furthermore, Shub discloses the customer has the option to request the order to be delivered to an alternate address (col. 2, lines 53-55). The goods is delivered to the customer's alternate address and gets the goods using the second bank order number x2 and the number pair (c, t) (col. 5, lines 60-63).

Stolfo, on the other hand, teaches an online shopping system, which a customer can designate, addresses or places where he or she wants to have goods delivered (col. 8, lines 3-8). Stolfo further teaches deciding that the receiver certifying information

Art Unit: 3627

generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal; and transferring the commodity to a receiver for the commodity at said non-residential place, when the receiver certifying information generated by the customer's terminal is corresponding to the receiver certifying information generated by the seller's terminal, by using said transaction ID information and a receiver certifying information which is generated so that is void of personal identification information (col. 19, lines 57-62; col. 23, line 61-col. 24, line 15; col. 25, lines 12-41).

Claims 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,807,530 to Shub et al. and U.S. Patent No. 7,069,249 to Stolfo et al as applied to claim 1 above, and further view of U.S. Patent No. 6,236,972 to Shkedy. Shub and Stolfo substantially disclose the claimed invention, however, the combination does not disclose digital signature. The combination identifying data which may be secret information such as a confidential code to the recipient and the OVM agent (Stolfo, col. 19, lines 62-65). Shkedy, on the other hand, teaches digital signatures (col. 5, lines 3-7).

Therefor, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the combination of Shub and Stolfo, to include digital signatures and biometrics, as taught by Shkedy, so as to authenticate the customer identification (Shkedy, col. 5, lines 3-4).

Claim 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,807,530 to Shub et al. and U.S. Patent No. 7,069,249 to Stolfo et al. as

Art Unit: 3627

applied to claim 1 above, and further view of U.S. Patent No. 6,085,170 to Tsukuda.

Regarding claim 9, Shub and Stolfo substantially disclose the claimed invention, however, the combination does not disclose a commodity cabinet. The combination discloses a physical address of a physical facility designated by the first party (customer) which may be depot for pick up (col. 8, lines 3-8). Tsukuda, on the other hand, teaches the commodity cabinet (col. 9, lines 38-46).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the combination of Shub and Stolfo, to include the commodity cabinet, as taught by Tsukuda, in order to store the goods inside the cabinet so that the customer can receive the goods at anytime (Tsukuda, col. 11, lines 19-24).

Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,807,530 to Shub et al. and U.S. Patent No. 7,069,249 to Stolfo et al. as applied to claim 1 above, and further view of U.S. Patent No. 6, 609,113 to O'Leary et al. Shub and Stolfo substantially discloses the claimed invention, however, the combination does not disclose the arrangement to pay a predetermined amount of money periodically to a customer's account established for the payment agent to make payment in behalf of the customer and the payment agent makes a direct debit of a price regarding the purchasing of the commodity in the customer's account. The combination disclose a payment agency which establishes protocols for the exchange of information (Shub col. 6, lines 17-19). The payment agency is the bank and/or credit

Art Unit: 3627

card company of the customer and can also be a specialized agency where the customer pays cash in exchange for a receipt (col. 4, lines 13-17). O'Leary, on the other hand, teaches the arrangement as recited above (abstract).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the combination, to include the payment arrangement, as taught by O'Leary, in order to pay the seller.

Claims 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,807,530 to Shub et al. and U.S. Patent No. 7,069,249 to Stolfo et al. as applied to claim 1 above, and further view of U.S. Patent No. 6,748,365 to Quinlan et al. Shub and Stolfo substantially discloses the claimed invention, however, the combination does not disclose the marketing information, discounts and age/sex information. Quinlan, on the other hand, teaches the marketing information, as recited above (col. 3, lines 26-51).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the combination, to include the marketing information, as taught by Quinlan, in order to redeem product rebates (Quinlan col. 1, lines 12-13).

Response to Arguments

Applicant's arguments with respect to claims 1-18 and 65 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thein Marissa whose telephone number is 571-272-6764. The examiner can normally be reached on M-F 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ryan Zeender can be reached on 571-272-6790. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
